

CSCS Launches SCOTI™, an Agentic AI-Powered Supply Chain platform for End-to-End Orchestration

ALPHARETTA, GA, UNITED STATES, January 7, 2026 /EINPresswire.com/ -- CSCS today announced the launch of [SCOTI™](#) (Supply Chain Optimization, Traceability & Integration), an AI agent-powered supply chain platform designed to address the operational pain points crippling modern supply chains.

While many platforms apply AI primarily for reporting or recommendations, SCOTI™ is built on [Agentic AI](#) — a multi-agent architecture that actively plans, executes, monitors, and adapts supply chain operations in real time. These AI agents automate decisions across transportation, warehousing, demand planning, integrations, and IoT, transforming supply chains from reactive cost centers into intelligent, profit-generating systems.

SCOTI™ delivers a purchase-order-to-delivery, end-to-end intelligent supply chain platform that integrates seamlessly with existing ERP, WMS, TMS, OMS, and partner systems. Unlike legacy platforms or narrowly focused point solutions, SCOTI™ eliminates the need for costly “rip-and-replace” modernization by providing a unified integration layer that connects fragmented systems into a single, real-time visibility fabric.

The platform continuously monitors operations, detects anomalies, resolves integration failures, and recommends or executes corrective actions within defined governance controls. Its cloud-agnostic integration layer includes more than 1,000 prebuilt connectors, enabling faster deployments and reduced IT dependency. As a result, organizations can reduce operating costs,

eliminate data silos, and improve fulfillment accuracy across the supply chain.

“Legacy supply chain platforms lack the cognitive AI capabilities required to truly transform supply chains into profit-generating assets,” said Mansoor Khan, CEO of CSCS. “This challenge is especially pronounced in the mid-market, where companies are forced to operate with disconnected systems and manual processes. SCOTI™ delivers enterprise-grade, end-to-end supply chain integration, visibility, and AI-driven optimization—leapfrogging legacy platform capabilities at a fraction of the cost.”

Customers typically achieve rapid ROI in under nine months, driven by reduced labor costs, fewer execution errors, optimized transportation spend, and improved inventory balance. CSCS focuses on underserved mid-market organizations operating with five to fifteen disconnected systems that urgently need affordable, AI-driven modernization.

About CSCS

CSCS is a PO to delivery next gen AI powered Warehouse and Transportation supply chain software. Our platform is less complicated and less expensive than legacy supply chain software and is powered by industry leading AI for higher ROI. We make your supply chain smarter.
